DocumentationRelevantDeps - What to load when extracting an entity

When we extract OrderForm.tsx, we should also load:

- `orderValidationSchema.ts` (FULLY - contains validation rules)
- `OrderService.create()` (signature + JSDoc)
- `useOrderState` hook (state shape)
- `ORDER_STATUS` enum (ALL values)

Properties

Property	Type
<code>entityId</code>	<code>string</code>
<code>required</code>	<code>`Array<{</code>

```
entityId: string;
reason: 'validation' | 'state' | 'constants' | 'error_handling';
loadStrategy: 'full' | 'signature_only' | 'values_only';
```

```
> | | helpful | Array<{
entityId: string;
reason: string;
loadStrategy: 'full' | 'signature_only';
}> | | estimatedTokens | {
required: number;
helpful: number;
```

```
total: number;  
} |
```
