Kind: Interface

Source: atloria-monorepo/apps/api/src/l10n/translation-format.ts

B6 translation format contract — the PURE half of the AI-translate pipeline.

Two responsibilities, both side-effect-free and property-testable:

1. `buildTranslationPrompt` — the prompt handed to the doc-automation AI provider. It carries the "don't translate machinery" contract: directive lines (`:::tabs` , `:::` , `:::include{...}`), fenced code blocks, and glossary keep-terms must survive VERBATIM. The reader pipeline parses those directives (and B4 expands `:::include` at the serving seam), so a translated directive is a broken page, not a translated one.
2. `extractProtectedSegments / verifyDirectivesPreserved` — the enforcement half. The worker verifies the model actually honored the contract before a machine translation is allowed to auto-publish; a violating result is kept as a draft for human review instead.
