LintTestConfig

Kind: Interface

Source: [atloria-monorepo/libs/agent-core/src/autonomous/lint-test-loop.ts](#)

Lint-Test-Fix Loop

Nudge-based post-edit verification. After the agent edits files, this module generates nudges telling it to run lint/test commands and tracks retry attempts.

Design: The agent decides whether to lint/test (not forced). Some edits (adding a comment) don't need it. The nudge makes it a strong suggestion. If lint/test fails repeatedly, a hard stop is injected.

Integration: Used by AutonomousTurnHook or directly by domain layers.

Properties

Property	Type
lintCommand	string
testCommand	string
typeCheckCommand	string
maxRetries	number
minEditsBeforeNudge	number
