## MDXEditorProps

**Kind:** Interface

**Source:** [atloria-monorepo/packages/editor/src/MDXEditor.tsx](#)

### Properties

| Property                 | Type                                                          |
|--------------------------|---------------------------------------------------------------|
| contentEditableClassName | string                                                        |
| spellCheck               | boolean                                                       |
| markdown                 | string                                                        |
| onChange                 | (markdown: string, initialMarkdownNormalize: boolean) => void |
| onError                  | (payload: { error: string; source: string }) => void          |
| toMarkdownOptions        | ToMarkdownOptions                                             |
| plugins                  | RealmPlugin[]                                                 |
| className                | string                                                        |
| autoFocus                | boolean                                                       |
| onBlur                   | (e: FocusEvent) => void                                       |
| placeholder              | React.ReactNode                                               |
| readOnly                 | boolean                                                       |
| iconComponentFor         | (name: IconKey) => JSX.Element                                |
| suppressHtmlProcessing   | boolean                                                       |
| translation              | Translation                                                   |
| trim                     | boolean                                                       |

| Property               | Type                    |
|------------------------|-------------------------|
| lexicalTheme           | EditorThemeClasses      |
| overlayContainer       | `HTMLElement            |
| suppressSharedHistory  | boolean                 |
| editorState            | `EditorState            |
| additionalLexicalNodes | AdditionalLexicalNode[] |
| lexicalEditorNamespace | string                  |
