PlaygroundOAuth2Config

Kind: Interface

Source: [atloria-monorepo/apps/web/src/lib/api-client.ts](https://github.com/atloria-monorepo/apps/web/src/lib/api-client.ts)

The playground's OAuth2 declaration (`project.settings.playgroundOAuth2`).

Every field is published verbatim in the served spec, so there is nothing to withhold — and

deliberately no client secret: a published documentation page is a public client, and the flow

is protected by PKCE. The API refuses a secret-shaped field outright.

Properties

Property	Type
<code>clientId</code>	<code>string</code>
<code>authorizationUrl</code>	<code>string</code>
<code>tokenUrl</code>	<code>string</code>
<code>openIdConnectUrl</code>	<code>string</code>
<code>scopes</code>	<code>Record<string, string></code>
