ScimName

Kind: Interface

Source: `atloria-monorepo/apps/api/src/scim/scim.mapper.ts`

User ↗ SCIM resource mapping (RFC 7643 §4.1).

Atloria stores a single `name` string, so we surface it as `name.formatted` + `displayName` and best-effort split into `given/family` for IdPs that show them. `userName` is the email (`User.email` is globally unique and is the SCIM handle).

Properties

Property	Type
<code>formatted</code>	<code>string</code>
<code>givenName</code>	<code>string</code>
<code>familyName</code>	<code>string</code>
