SectionResolution

Kind: Interface

Source: atloria-monorepo/apps/web/src/components/change-requests/section-merge.ts

Pure helpers for composing a resolved markdown document from per-section conflict choices (change-request three-way resolution).

The authoritative full text is the CURRENT document content ("mine"); a resolution replaces one heading-delimited section of it with the chosen text (usually the proposed "theirs" text, or a manual inline edit).

A "section" spans from its heading line (`# $\{level\}$  Heading`) up to — but not including — the next heading of the same or shallower level (or EOF).

Properties

Property	Type
<code>heading</code>	<code>string</code>
<code>level</code>	<code>number</code>
<code>text</code>	<code>string</code>
