Semantic Pattern Detector

Detects semantic patterns in code to understand business logic:

- State machines (enums with Stage/Status/State)
- State transitions (methods that change state)
- Modal/dialog triggers
- Approval workflows

This enables comprehensive documentation and screenshot capture.

Properties

Property	Type
<code>hasStateMachine</code>	<code>boolean</code>
<code>stateEnums</code>	<code>string[]</code>
<code>transitionMethods</code>	<code>string[]</code>
<code>modalTriggers</code>	<code>string[]</code>
<code>approvalStates</code>	<code>string[]</code>
