SignificanceCheckable

Kind: Interface

Source: atloria-monorepo/libs/parser-core/src/techdocs/significance.ts

Significance gate for technical reference docs (audit FIX 1).

The published corpus was 28% junk: entities mined from generated/minified/vendored code

(literal `Bn` pages from a checked-in Prisma client) plus test scaffolding. This is the ONE

shared predicate both the parse pipeline (navMap + snapshot) and the materializer (transformSnapshotToDocSet) apply, so pages, nav, llms.txt and search all agree on what exists.

Pure + dependency-free so it is trivially unit-testable and usable from any surface.

Properties

Property	Type
<code>name</code>	<code>string</code>
<code>filePath</code>	<code>string</code>
