Tool Usage Guide

Generates instruction text that teaches agents how to use filesystem tools effectively. Modeled after Claude Code's system prompt approach:

- Read before Edit (mandatory)
- Glob to find, Read to understand, Edit to modify
- Uniqueness discipline for surgical edits
- Verification after changes

Inject this into agent instructions when the agent has access to edit/write tools. Without this guidance, agents will attempt to regenerate entire files instead of making targeted edits.

Properties

Property	Type
<code>tools</code>	<code>`('read'</code>
<code>includeWorkflow</code>	<code>boolean</code>
