VideoChapter

Kind: Interface

Source: `atloria-monorepo/packages/types/src/models/video.ts`

Manual video model (D1)

The contract for auto-narrated video / GIF walkthroughs, shared between the producer (atlorix build_videos -> the API's UploadService rewrite) and the render side (the web viewer's ChapteredVideo). A page-level chaptered video is produced from the recorded click trajectory + spoken narration; the reader seeks the native player from a chapter list and can show WebVTT captions.

atlorix emits `[[VIDEO: ]]` / `[[GIF: --sNN]]` tokens into the page and a per-page `<slug>.video.json` (ManualVideoManifest). UploadService uploads the `videos/` artifacts, rewrites `[[VIDEO:]]` -> a `:::video{...}` directive and `[[GIF:]]` -> a markdown image, and persists one ManualVideo row per page.

Properties

Property	Type
<code>step</code>	<code>number</code>
<code>title</code>	<code>string</code>
<code>start</code>	<code>number</code>
<code>startMs</code>	<code>number</code>
