VideoHotspot

Kind: Interface

Source: [atloria-monorepo/packages/types/src/models/video.ts](https://github.com/atloria-monorepo/packages/types/src/models/video.ts)

An interactive clickable hotspot overlaid on a page video, synced to playback time. While the player's `currentTime` is within a small window of `tMs`, the reader shows a pulsing marker at (`xPct` , `yPct`); clicking it seeks to `seekToMs` (or just surfaces `label`). Emitted by `atlorix build_videos` and persisted verbatim onto `ManualVideo.hotspots` .

Properties

Property	Type
<code>tMs</code>	<code>number</code>
<code>xPct</code>	<code>number</code>
<code>yPct</code>	<code>number</code>
<code>label</code>	<code>string</code>
<code>stepIndex</code>	<code>number</code>
<code>seekToMs</code>	<code>number</code>
