Projects overview

Projects at a glance

A project is the workspace entry for documentation work. Use it to reach project documentation and relationship views.

If you need to...	Go to
Understand how project work is organised	Projects overview
Create a project	Create a project
Change project configuration	Manage project settings
Work with documents	Documents overview
Follow documentation generation	Documentation generation lifecycle
Work with project versions	Project versions
Review project changes and audit information	Project changes and audit

Open **Projects** to reach the project list. From there, continue into the project work you need.

Before you start

Know which project you need and which documentation task you want to complete next. Use the focused pages linked below when your task is project creation, project configuration, document work, generation, versioning, or audit.

Find and open a project

The project list is the starting point for locating project work.

Prerequisites

- You know which project you need to work with.

Steps

1. Open **Projects**.

Result: The project list is on screen.

Understand the project screen

The project screen is where you choose whether to continue into documentation work or relationship views. Use the focused destination that matches the work you want to complete.

Use the documentation surfaces

If you need to...	Go to
Work with documents	Documents overview
Work with project versions	Project versions
View relationships	The graph surface

Know what to do next

Choose the focused page that matches the work you want to complete:

Next task	Page
Create a project	Create a project
Change project settings	Manage project settings
Work with documents	Documents overview
Follow documentation generation	Documentation generation lifecycle
Review project versions	Project versions
Review project changes and audit information	Project changes and audit
