Review security information

Security and audit information

The project audit trail is the record of activity for one selected project. Use it when you need to review who did what and when, inspect event details, or export the project audit information.

If you need to...	Go to...
Open the project audit trail	Open Security & Audit
Understand the filter, columns, and controls	Understand the audit screen
Filter, inspect, page through, or export events	Review and export audit events
Handle an empty or loading result	Handle empty, loading, and paging states
Review related audit administration	Security & Audit overview or Audit reference
Review organization-wide audit information	Organization audit

The Security & Audit surface sits alongside Analytics, Audit Trail, Export Center, and Access Control in the product's enterprise administration areas.

Before you start

The audit trail is scoped to one project at a time. Select the project whose activity you want to review before the event list can load.

Prerequisites

- You are signed in and can open the **Security & Audit** page.
- A current project is selected in the header.

If no project is selected, the page displays **Select a project**. It also displays

The audit trail is scoped to one project at a time. and

Choose a project from the header dropdown to view its audit log.

Open Security & Audit

Steps

1. Open the **Security & Audit** entry in the administrative navigation.
2. Confirm that the **Security & Audit** page is open.

The screenshot shows the Atloria v1.0.0 interface. The top navigation bar includes 'Home > Admin > Security', a project dropdown set to 'Atloria (self dogfood)', a version dropdown set to 'v85 — atlorix-extern', a search bar, and user information for 'Ramy Othman'. The left sidebar contains a 'WORKSPACE' section with 'Dashboard', 'Projects', and 'Documents', and an 'ENTERPRISE' section with 'Operations', 'Analytics', 'Screenshots', 'Videos', and 'Captured Flows'. Below these are 'AI & TOOLS' (Support Agent), 'SETTINGS' (Desk, Issues, Organization, Branding, Integrations, Billing), and 'PLATFORM' (Organizations). The main content area is titled 'Security & Audit' with a subtitle '85 audit events · who did what, when'. It features a filter dropdown set to 'All Actions'. The table below has four columns: 'WHEN', 'USER', 'ACTION', and 'DETAILS'. The 'WHEN' column shows timestamps like '10h ago' and '7/28/2026'. The 'USER' column shows 'Unknown'. The 'ACTION' column shows 'version.activated'. The 'DETAILS' column shows a minus sign. At the bottom, it says 'Showing 1-20 of 85 events' with a 'Next' button and an 'Export CSV' button.

WHEN	USER	ACTION	DETAILS
> 10h ago	Unknown	version.activated	—
> 13h ago	Unknown	version.activated	—
> 15h ago	Unknown	version.activated	—
> 19h ago	Unknown	version.activated	—
> 7/28/2026	Unknown	version.activated	—
> 7/28/2026	Unknown	version.activated	—
> 7/28/2026	Unknown	version.activated	—
> 7/28/2026	Unknown	version.activated	—
> 7/28/2026	Unknown	version.activated	—
> 7/28/2026	Unknown	version.activated	—
> 7/28/2026	Unknown	version.activated	—
> 7/28/2026	Unknown	version.activated	—
> 7/28/2026	Unknown	version.activated	—
> 7/28/2026	Unknown	version.activated	—
> 7/28/2026	Unknown	version.activated	—
> 7/28/2026	Unknown	version.activated	—
> 7/28/2026	Unknown	version.activated	—
> 7/28/2026	Unknown	version.activated	—
> 7/28/2026	Unknown	version.activated	—
> 7/28/2026	Unknown	version.activated	—
> 7/28/2026	Unknown	version.activated	—

Result: The **Security & Audit** page is open for the selected project.

Understand the audit screen

The audit screen combines one action filter with an event list. Each row gives the event

time, user, action, and details; selecting a row opens its metadata.

The screen contains these parts:

Screen part	What you use it for
Action filter	Limit the list to one action or return to all actions

Screen part	What you use it for
When	Read when the event occurred
User	Identify the user shown for the event
Action	Read the recorded action
Details	Read the event details
Event row	Open the event's metadata
Previous and Next	Move through result pages
Export CSV	Request a CSV copy of the project audit trail

The **Action filter** offers these choices:

Choice	Use it to...
All Actions	Show the list without an action filter
<code>version.published</code>	Filter for published-version events
<code>document.updated</code>	Filter for updated-document events
<code>document.edited</code>	Filter for edited-document events
<code>webhook.received</code>	Filter for received-webhook events
<code>version.reviewed</code>	Filter for reviewed-version events
<code>export.downloaded</code>	Filter for downloaded-export events
<code>schedule.triggered</code>	Filter for triggered-schedule events

The page heading is **Security & Audit**. Its summary reads

Who did what, when – the full audit trail for the selected project .

While data loads, the page displays Loading audit events... . When no events match, it displays **No audit events found** and

Events appear here as soon as anything is published, edited, or exported.

Review and export audit events

Use this procedure when a project is selected and the audit list is available.

Prerequisites

- A project is selected in the header.
- The audit page is open.

Steps

1. Select **All Actions** or another choice in **Action filter**.
2. Read the matching event rows under **When, User, Action, and Details**.
3. Select an event row to open its metadata.
4. Choose one available action from the table.

Choose	When to use it	Result
Previous	When it is visible and you need earlier results	The list moves back 20 events
Next	When it is visible and you need later results	The list moves forward 20 events
Export CSV	When you need a CSV copy of the project audit trail	The page requests the project audit CSV

The filter resets the result offset to zero when you change the selected action. The page

requests the selected action together with a limit of 20 and the current offset.

Result: The filtered audit list remains on the Security & Audit page, and selecting **Export CSV** starts the project audit CSV request.

Handle empty, loading, and paging states

The page changes its visible content according to the selected project, loading state, and number of returned events.

What you see	What it means	What to do
Select a project	No current project is selected	Choose a project from the header dropdown
Loading audit events...	The project audit request is loading	Wait for the list or empty state
No audit events found	The current result contains no events	Review the action choice or select another project
When, User, Action, and Details	The current project has events to review	Read the rows or use the action filter
Previous	Earlier results are available	Move back one page

What you see	What it means	What to do
Next	Later results are available	Move forward one page

This page provides an action filter. Its declared filters do not include actor, project, start-date, or end-date choices.

Result: The page shows the state that matches the current project and result set, with the applicable review and paging controls visible.

When review does not complete

Use the visible message to choose the next action.

What you see	What it means	What to do
Select a project	The page has no current project to query	Choose a project from the header dropdown
Loading audit events...	The audit request is still loading	Wait for the result state
No audit events found	No events are available in the current result	Change Action filter or select another project
Export CSV	The page requests a CSV copy of the project audit trail	Select Export CSV when you need a copy

If an audit request fails, the page stays on the audit screen with an empty event list and no separate error message. The event row remains the way to open its metadata.

Continue from the audit review

After reviewing the project audit trail, use **Export CSV** when you need a copy of the project audit information. For the broader administrative context, continue to [Security & Audit overview](#). For related audit information, open [Audit reference](#). For organization-wide audit information, open [Organization audit](#).

Result: You have either completed the project audit review on this page or moved to the related administrative information for the next part of the review.
