

What can you do with Atloria

September 15, 2026

What can you do with Atloria

What you can do in Atloria

Atloria's main workspace helps you create projects, generate documentation, organize documents, and monitor documentation work. Use the dashboard for a quick starting point, Projects for project work, Documents for document organization, and Operations for activity and job information.

If you need to...	Start here
Create a project or start documentation generation	The dashboard or Projects
Find, filter, categorize, or reorder documents	Documents
Review generation, AI, credits, chat, jobs, or queues	Operations

Before you start

You need an authenticated workspace session for the dashboard data and document loading.

Documents also require a selected project. If you are creating a project, prepare a repository URL when you want Atloria to read a repository, or use **Create without a repository** when you want to begin without one.

The project wizard lets you choose documentation outputs. The available choices are:

Output	Use it for
User Guides	Step-by-step guides, tutorials, and screenshots
Technical Docs	Component trees, entity graphs, and architecture diagrams

Output	Use it for
API Reference	OpenAPI specifications, endpoints, and request/response examples
Support Bot	Not available for selection; it is marked Soon

Project creation also depends on the project name, slug, and branch being available before you

continue from project details. Private repository access can require the

Authentication

path before the configuration path is available.

Find the workspace task

Use the following workspace destinations to reach the work you want to do:

If you want to...	Open
Start at the workspace dashboard	Dashboard
Work with the project list	Projects
Work with documents and categories	Documents
Review operational information	Operations

Choose a starting point

Prerequisites

- You know whether you are creating a project, organizing documents, or reviewing activity.

Steps

- Choose one starting point from the table below.

Your task	Action
Start from recent projects or the project wizard	Open the dashboard
Open the complete project list	Select View all from the dashboard when it is available
Open a particular project	Select Open for the project you want to open.
Open the project list directly	Open Projects

Your task	Action
Open document work	Open Documents
Review operational information	Open Operations

Result: The workspace surface for your task is on screen.

Understand the workspace surfaces

The dashboard presents recent projects with the headers `Project` , `Docs` , `Categories` , and

`Updated` . Projects provides project search, status filtering, sorting, project counts, source, document and category counts, status, and update information. Documents provides a version choice, a category tree, and the document list. Operations presents generation success, AI spend, credits, deflection rate, attention lists, AI usage by model, recent jobs, and queues.

Use the surface that answers the question you have:

Question	Surface to use
Which projects are available and when were they updated?	The Projects list
Which documents belong to a category or version?	Documents
How are generation jobs and recent activity performing?	Operations

Create and organize documentation work

Start project creation or documentation generation

Prerequisites

- You have a repository URL, or you intend to create without a repository.
- You have chosen at least one enabled documentation output before generation.

Steps

1. Choose how to start the project.

Starting condition	Action
You are starting without a repository	Select Create without a repository

Starting condition	Action
You have entered a valid repository URL	Select Get Started →

2. Choose the documentation outputs.

Your choice	Action
Every enabled output	Select Select All
Specific enabled outputs	Select each output you want

3. Select **Generate Documentation** → after choosing at least one output.

Result: Atloria starts project creation and the selected documentation work.

Filter and sort projects

Prerequisites

- Projects are available in the project list.

Steps

1. Enter text in **Search projects...** to filter by project name or description.
2. Choose **All statuses**, **Active**, **Draft**, **Published**, or **Archived** to filter by status.
3. Choose **Last updated**, **Name A–Z**, **Name Z–A**, or **Date created** to change the order.

Result: The project list shows the projects that match the search, status, and sort choices.

Change document order

Prerequisites

- A project is selected for document work.

Steps

1. Select **Edit order** to enter document-ordering mode.
2. Drag documents or categories to the required position.
3. Select **Exit edit mode** when the order is complete.

Result: Documents are shown in the selected order.

Clear the category filter

Prerequisites

- A category filter is selected in Documents.

Steps

1. Select **Clear** to remove the selected category filter.

Result: The selected category filter is cleared.

Draft from an insight

Prerequisites

- A manual insight with a **Draft page** action is available.

Steps

1. Select **Draft page** beside the manual insight.

Result: The selected drafting route is on screen.

Choose the right branch

The available path changes with your access and current workspace data. Use these rules before you continue:

Prerequisites

- You have access to the workspace and can identify the condition that applies.

Steps

1. Choose the situation that matches your workspace.

Situation	What to do
You need private repository access	Use Authentication , then continue through Configuration after access is resolved
You have no project selected	Select a project before working with documents
No versions exist	Continue with the document list without a version choice
The project list is empty	Use the empty-state New project action
No projects exist for manual insights	Continue with the other Operations information

Situation	What to do
You want the unavailable output	Choose an enabled output instead of Support Bot

Result: You are on the path supported by your access, project, version, and output choices.

When a workspace action fails

Use the exact message on screen to choose the next action.

Prerequisites

- A workspace action has displayed one of the messages in the table.

Steps

1. Choose the matching message and follow its action in the table.

What you see	What to do
Please enter a valid GitHub, GitLab, or Bitbucket repository URL	Correct the repository URL before selecting Get Started → again.
Could not access repository	Check the repository access details and test the connection again.
Connection test failed – check your credentials	Check the credentials before testing the connection again.
Failed to create config	Review the project setup and retry project creation.
Failed to create project	Review the project setup and retry project creation.
Projects failed to load.	Retry loading the Projects page.
Name doesn't match	Enter the exact project name in the deletion confirmation field.
This action is permanent and cannot be undone	Continue only when permanent deletion is intended.
Failed to delete category	Retry the category deletion.
Failed to reorder documents. Please try again.	Retry document ordering.

What you see	What to do
Failed to reorder categories. Please try again.	Retry category ordering.
Operations failed to load.	Retry loading the Operations page.
Insights failed to load.	Retry loading manual insights.

Result: You have the recovery action that matches the message on screen.

Continue to the dedicated task

Use the focused page for the next task:

Prerequisites

- You have chosen the task you want to complete next.

Steps

1. Choose the focused page for the task you want to complete.

Next task	Page
Create a complete project	Create a project
Understand project organization	Projects overview
Work with the document list	Documents overview
Create or edit a document	Create and edit a document
Review operational information	Operations overview
Follow generation stages	Documentation generation lifecycle
Interpret job status	Documentation job status reference
Move between workspace destinations	Navigation basics

Result: You have chosen the dedicated task page for the work you want to complete next.
