Who uses Atloria

The administration dashboard is the starting point for choosing an administration area.

Overview

Use its links to choose the area that matches your work. It brings together links for users, organizations, documents, projects, operations, AI configuration, system settings, and security and audit work.

If you need to...	Go to
Manage users or add a user	Users & Permissions or Add New User
Manage organizations	Organizations
Work with documents	Documents
Work with projects	Projects or Create Project
Review operations and analytics	Operations & Analytics
Open AI configuration	AI Configuration
Open application settings	System Settings
Review security information	Security & Audit

The detailed work continues on the relevant page: [Users and permissions overview](#), [Organization overview](#), [Documents overview](#), [Projects overview](#), [Operations overview](#), [AI configuration overview](#), [System settings overview](#), or [Security and audit overview](#).

Before you start

Prerequisites

- You are signed in to Atloria.
- Your session is active so the administration dashboard can show the signed-in identity and load the project count.
- You know which area of administration you need to open.

The subtitle can include your signed-in name and role. The **Your Projects** value appears as a project count when the project request succeeds; a failed request leaves that value as .

The administration page does not define which roles may open each destination. Use the access you have been given when selecting an area.

Open the administration dashboard

Open the administration dashboard before choosing an administration area.

Prerequisites

- You are signed in to Atloria.

Steps

1. Open the administration dashboard.

Result: The administration dashboard is on screen with its administration links and quick actions.

Read the administration dashboard

The administration dashboard is a list of destinations rather than an inline editing form. The administration links are grouped as follows:

Area	What the destination is for	Control
Users and access	Manage users, roles, and access control	Users & Permissions
Organizations	Manage organizations and team structure	Organizations

Area	What the destination is for	Control
Documents	Manage documents and bulk operations	Documents
Projects	Open project settings and configurations	Projects
Operations and analytics	Review jobs, AI spend, credits, deflection, and queue health	Operations & Analytics
AI configuration	Manage AI models, providers, and API settings	AI Configuration
System settings	Manage application configuration and preferences	System Settings
Security and audit	Review security logs and the audit trail	Security & Audit

The quick actions provide shorter routes to two areas: **Add New User** opens user management and

Create Project opens projects. **System Settings** also appears as a quick action.

The subtitle includes the signed-in name when one is available and adds the role when one is

available. When the project request fails, the value remains . The page does not provide

editable fields, filters, a grid, or a save action. It also

does not show its own validation, confirmation, or error message for the project-count failure.

Choose an administration area

Select the destination that matches the work you need to do. Each destination opens its own area.

Prerequisites

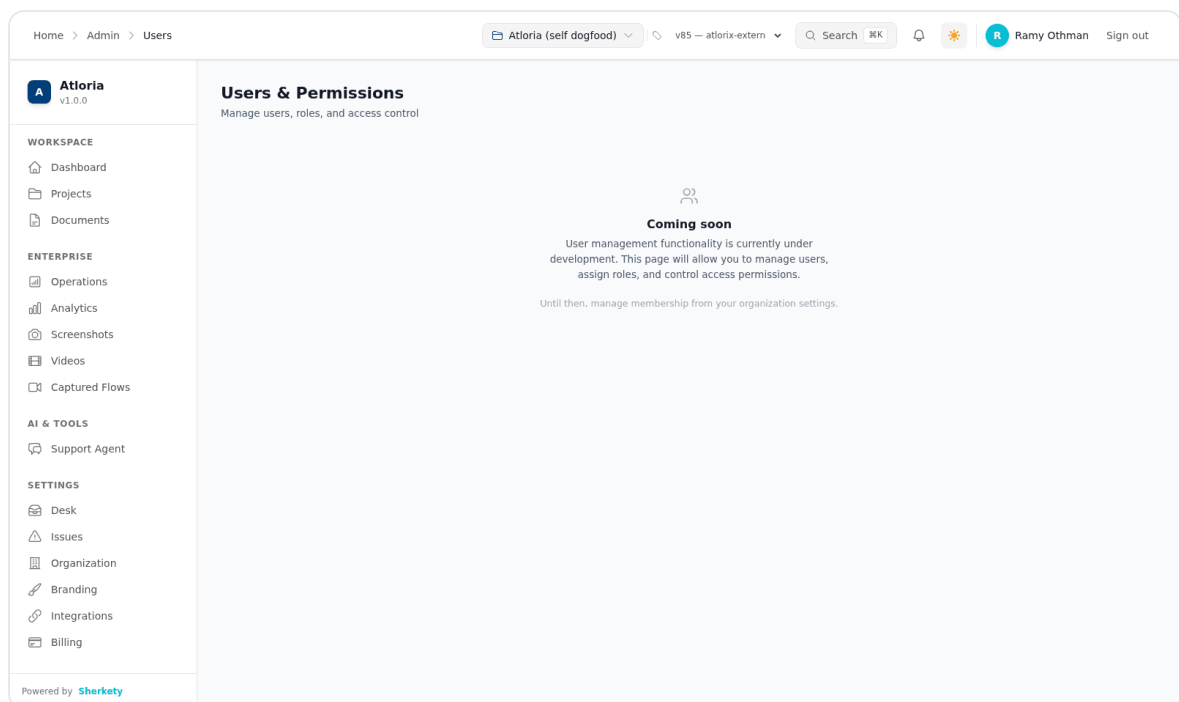

- The administration dashboard is on screen.

Steps

1. Select the control for the area you need.

If you need to...	Select...	Result
Manage users or add a user	Users & Permissions or Add New User	The users area opens.
Manage organizations	Organizations	The organizations area opens.

If you need to...	Select...	Result
Work with documents	Documents	The documents area opens.
Work with projects or create a project	Projects or Create Project	The projects area opens.
Review operations and analytics	Operations & Analytics	The operations and analytics area opens.
Open AI configuration	AI Configuration	The AI configuration destination opens.
Open application settings	System Settings	The system settings area opens.
Review security information	Security & Audit	The security and audit area opens.

2. Check the destination route before continuing with that area's work.

Result: The selected administration area is on screen at its destination route.

When a destination is unavailable

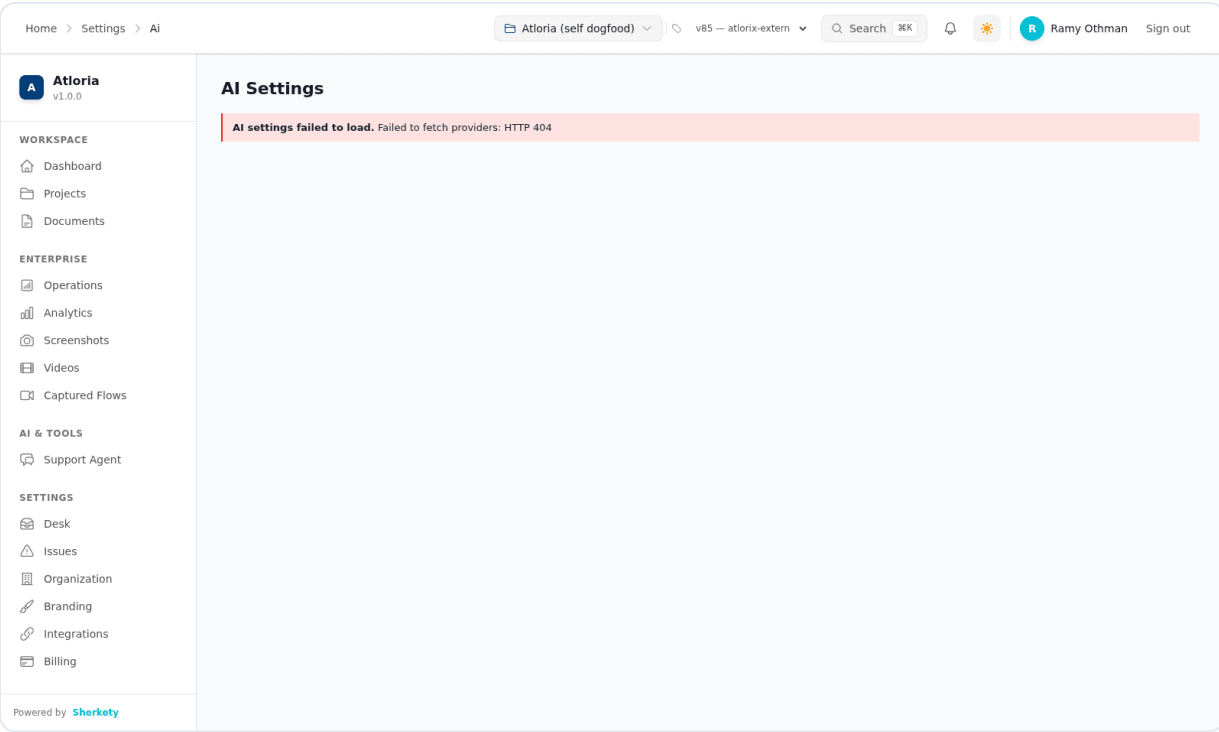

A destination can open with a loading indicator or an error page. These outcomes belong to the destination, not to the administration dashboard.

Generated from Atloria (self dogfood) docs · September 15, 2026

5 / 7

What you see	Destination	Result
A loading indicator remains on screen	Documents	The destination has not presented its working content.
404	AI Configuration	The destination is unavailable.

The administration page itself produced no dialog, stage change, validation message, confirmation message, or error message. For application-wide error wording, see [General error messages](#).

Continue in the selected area

After a destination opens, continue with the page that owns that area. Use the link for the area you selected to continue with its tasks.

Destination	Continue with
Users and permissions	Users and permissions overview
Organizations	Organization overview
Documents	Documents overview

Destination	Continue with
Projects	Projects overview
Operations and analytics	Operations overview
AI configuration	AI configuration overview
System settings	System settings overview
Security and audit	Security and audit overview

Result: You are on the page for the administration area you selected.
