Sign in

Overview

Sign-in authenticates your account. Enter your credentials on the login page; after a successful

sign-in, the application takes you to `/`.

If you need to...	Go to
Prepare the information for sign-in	Prerequisites
Open the sign-in page	Open the sign-in page
Identify the fields and controls	Understand the sign-in screen
Submit your credentials	Submit your credentials
Respond to a loading or rejected request	Handle sign-in responses
Continue after sign-in	Know what happens next
Understand how sign-in, sign-up, and settings fit together	Authentication overview
Create an account	Sign up
Manage your account after signing in	Manage your settings
Find general error guidance	General error messages

Prerequisites

Have the email address and password for the account you want to sign in to. The sign-in request uses those two values.

The page does not mark either sign-in field as required. Enter both values before selecting

Sign in so the request contains the credentials you intend to use.

Open the sign-in page

The sign-in page is the `/login` route.

Prerequisites

- Have the account email address and password ready.

Steps

1. Open `/login`.

Result: The application opens the sign-in page.

Understand the sign-in screen

The sign-in screen contains the `Sign In` heading, two credential fields, a registration link,

the **Sign in** control, and an area for returned errors.

Screen item	What to use it for
Email	Enter the account email address.
Password	Enter the account password.
Need an account?	Open the registration page.
Sign in	Submit the entered credentials.
Error area	Read returned error properties.

While the request is in progress, **Sign in** is disabled. When returned errors are available, the error area displays one line for each error as the error key followed by its returned error text.

Submit your credentials

Use this procedure to send the email address and password to the sign-in service.

Prerequisites

- Be on `/login` with the account email address and password ready.

Steps

1. Enter the account email address in **Email**.
2. Enter the account password in **Password**.
3. Select **Sign in**.

Result: The application authenticates your account and takes you to `/` after a successful sign-in.

Handle sign-in responses

The response has two reader-facing branches: **Sign in** is disabled while the request is in progress, and a rejected response leaves the page available for correction and another attempt.

Prerequisites

- Have the sign-in request in progress or have received a returned error.

Steps

1. Use the branch that matches what is on screen:

If you see...	Do this
Sign in is disabled	Wait for the request to finish.
An error line in the error area	Read the line and select Sign in again.

Result: A completed request either continues to the successful landing route or leaves the returned error text in the error area, with the error key before its returned error text.

Know what happens next

After successful sign-in, the application takes you to `/`.

If you do not have an account, select **Need an account?** to open `/register`.

Result: You are at `/` after a successful sign-in, or at `/register` when you choose to create an account.
