

baseRoutePath

August 18, 2026

baseRoutePath

Kind: Function**Source:** `src/helper/route/index.ts`**Part of:** [Helper](#)

Get the basePath of the as-is route specified by routing.

`baseRoutePath` returns the base path for the route described by `routing`. Use it when route-aware code needs the declared path without duplicating route-path handling.

Signature

```
function baseRoutePath(c: Context, index: number): string
```

Parameters

Name	Type
<code>c</code>	<code>Context</code>
<code>index</code>	<code>number</code>

Returns: `string`

Diagram

```
graph LR
  A[Routing value] --> B[baseRoutePath]
  B --> C[Base route path]
```

Usage

```
import { baseRoutePath } from '@helper/route';

const routing = '/articles/[slug]';

const path = baseRoutePath(routing);

// Use the base route path in route-aware logic.
console.log(path);
```

AI Coding Instructions

- Pass the routing value from the route configuration rather than rebuilding its path in calling code.
- Keep route parsing and base-path extraction inside `baseRoutePath`.
- Preserve dynamic route segments when passing route definitions to this function.
- Update callers if the routing value format changes.
