

mergePath

August 17, 2026

mergePath

Kind: Function

Source: `src/utils/url.ts`

Part of: [Utils](#)

Merge paths.

`mergePath` combines path values into a single URL path. Use it when building route, endpoint, or asset paths so callers do not need to concatenate path strings manually.

Signature

```
function mergePath(base: string | undefined, sub: string | undefined, rest: string[]): string
```

Parameters

Name	Type
<code>base</code>	<code>`string</code>
<code>sub</code>	<code>`string</code>
<code>rest</code>	<code>string[]</code>

Returns: `string`

Diagram

```
graph LR
  A[Base path] --> C[mergePath]
  B[Path segment] --> C
  C --> D[Merged path]
```

Usage

```
import { mergePath } from './utils/url';

const usersPath = mergePath('/api/', '/users');

console.log(usersPath); // /api/users
```

AI Coding Instructions

- Pass path segments to `mergePath` instead of concatenating strings with `/`.
- Keep path inputs consistent with existing callers, especially leading and trailing slashes.
- Use this helper when constructing routes, API endpoints, or asset paths in shared URL-building code.
- Do not assume it handles full URLs, query parameters, or hash fragments unless its implementation supports them.

Used by

1 reference from 1 file. Each is a place in this repository where the symbol is actually used — go read one rather than trusting an example.
