

# resolveCallback

August 18, 2026

## resolveCallback

**Kind:** Function

**Source:** `src/utils/html.ts`

**Part of:** [Utils](#)

## Signature

```
async function resolveCallback(str: string | HtmlEscapedString | Promise<string>, phase: (typeof
```

## Parameters

| Name                           | Type                                                                                  |
|--------------------------------|---------------------------------------------------------------------------------------|
| <code>str</code>               | <code>`string</code>                                                                  |
| <code>phase</code>             | <code>(typeof HtmlEscapedCallbackPhase)[keyof typeof HtmlEscapedCallbackPhase]</code> |
| <code>preserveCallbacks</code> | <code>boolean</code>                                                                  |
| <code>context</code>           | <code>object</code>                                                                   |
| <code>buffer</code>            | <code>[string]</code>                                                                 |

**Returns:** `Promise<string>`

## Used by

4 references from 4 files. Each is a place in this repository where the symbol is actually used — go read one rather than trusting an example.
