ssgParams

Kind: Function**Source:** `src/helper/ssg/middleware.ts`**Part of:** [Helper](#)

Define SSG Route

`ssgParams` defines route parameters for static site generation. It connects route-specific parameter data to the SSG middleware so matching pages can be generated during the build process.

Signature

```
function ssgParams(params)
```

Parameters

Name	Type
<code>params</code>	<code>any</code>

Diagram

```
graph LR

  Params --> ssgParams[ssgParams]
  ssgParams --> Middleware[SSG middleware]
  Middleware --> StaticPage[Generated static page]
```

Usage

```
import { ssgParams } from './helper/ssg/middleware'

const params = ssgParams({
  slug: 'getting-started',
})

export default params
```

AI Coding Instructions

- Keep SSG parameter values aligned with the dynamic segments declared by the route.
- Pass serializable values that can be resolved during static generation.
- Add route parameter handling through `ssgParams` instead of duplicating SSG middleware behavior.
- Verify that generated parameter values match the paths expected by the router.
