SendOptions

Kind: Interface**Source:** `src/helper/websocket/index.ts`**Part of:** [Helper](#)

Options for sending message

`SendOptions` defines options applied when sending a WebSocket message. Its `compress` property controls whether message compression is enabled for the send operation.

Properties

Property	Type
<code>compress</code>	<code>boolean</code>

Diagram

```
graph LR

    Options --> Compress[compress: boolean]
    Options --> Send[Send operation]
```

Usage

```
import type { SendOptions } from "../helper/websocket";

const options: SendOptions = {
  compress: true,
};
```

```
// Pass `options` to the WebSocket message send operation.
```

AI Coding Instructions

- Set `compress` explicitly when constructing `SendOptions` .
- Keep this interface limited to message-send configuration.
- Use `SendOptions` as a type annotation for options passed into WebSocket send code.
- Do not treat `compress` as message content; it only controls send behavior.
