## Platform Socket.io

---

### What it is responsible for

Platform Socket.io manages access to its documented starting points, `Readme.md` and `IoAdapter`. Its available documentation frames Nest as a framework for Node.js server-side applications and directs readers to the guide at docs.nestjs.com. It also identifies the official Discord channel for questions and support, asks issue reporters to read the Issue Reporting Checklist, and states that Nest is MIT-licensed. The supplied evidence does not describe `IoAdapter`'s behavior beyond its role as a class through which work enters.

### Notable members

- `IoAdapter` — the sole named class and a work-entry symbol; no method-level behavior is documented here.
- `Readme.md` — the documentation entry point, carrying Getting started, support, issue-reporting, sponsor, and license material.
- `guide` — the referenced documentation destination, linked through docs.nestjs.com for readers seeking getting-started guidance as described by the supplied documentation only.

31 entities in `packages/platform-socket.io`. Nothing else in this repository depends on it.

### What it is made of

Its 31 entities sit in 2 files under `packages/platform-socket.io`: 29 doc comments, 1 markdown doc and 1 classe.

`IoAdapter` declares 5 methods, the widest surface here.

### Where work enters

- `Readme.md` — `packages/platform-socket.io/Readme.md :1`

- `IoAdapter` — `packages/platform-socket.io/adapters/io-adapter.ts` :14

## How it refuses and fails

1 of its components records a refusal or a failure handler.

It refuses work outright, under a condition written into the component itself.
