Account

Kind: Class

Source: `Pams/Web/Pams.WebApp/Client/app/models/person/accounts.model.ts` (line 10)

Part of: [Pams](#)

`Account` is a client-side model for account data associated with a person. It supports copying account state through `clone()` and creating a supplier-oriented copy through `cloneSupplier()`.

Methods

Method	Signature	Returns
<code>clone</code>	<code>clone()</code>	<code>Account</code>
<code>cloneSupplier</code>	<code>cloneSupplier(spi: Account)</code>	<code>Account</code>

Properties

Property	Type
<code>PrimaryID</code>	<code>number</code>
<code>UserID</code>	<code>number</code>
<code>CompanyBranchID</code>	<code>number</code>
<code>AccountCurrencyCode</code>	<code>string</code>
<code>ClientVendorTypeID</code>	<code>number</code>
<code>AccountTypeID</code>	<code>number</code>
<code>Name</code>	<code>string</code>
<code>FullName</code>	<code>string</code>

Property	Type
ModificationDate	Date
Vat	string
IsActive	boolean
ImgPath	string
ContractualInfo	SupplierContractualInfo
MarketSegmentID	number
MarketSegmentIDs	number[]
Addresses	Address[]
ContactInfoList	Array<ContactInfo>
ContactPersonList	Array<ContactPersons>
registrationData	Array<ClientSupplierRegistration>

Diagram

```
graph LR
    Person[Person model] --> Account[Account]
    Account --> Clone[clone(): Account]
    Account --> SupplierClone[cloneSupplier(): Account]
```

Usage

```
import { Account } from './models/person/accounts.model';

const account = new Account();

const accountCopy = account.clone();
const supplierAccount = account.cloneSupplier();
```

AI Coding Instructions

- Use `clone()` when a separate `Account` instance needs the same account state.
- Use `cloneSupplier()` when passing account data through supplier-specific flows.
- Keep cloning logic inside `Account` so callers do not manually copy model fields.

- Update both clone methods when adding fields that must persist in copied accounts.

Relationships

- IMPORTS → Address
