Usage

```
import { Account } from './accounts.model';

function copyAccount(account: Account): Account {
  const copy = account.clone();

  return copy;
}

function copySupplierAccount(account: Account): Account {
```

```
return account.cloneSupplier();  
}
```

AI Coding Instructions

- Import `Account` from the person accounts model when working with account data.
- Call `clone()` when the caller needs a copied `Account`.
- Call `cloneSupplier()` only for supplier-specific account flows.
- Keep cloned values typed as `Account` when passing them to services or components.
