Client

Kind: Class

Source: Pams/Web/Pams.WebApp/Client/app/models/person/client.model.ts (line 5)

Part of: Pams

`Client` is a person-domain model in the web application. It supports creating copies of a client instance through `clone()` and `cloneClient()`.

Methods

Method	Signature	Returns
<code>clone</code>	<code>clone()</code>	<code>Client</code>
<code>cloneClient</code>	<code>cloneClient(cli: Client)</code>	<code>Client</code>

Properties

Property	Type
<code>ClientID</code>	<code>number</code>
<code>UserID</code>	<code>number</code>
<code>ModificationDate</code>	<code>Date</code>
<code>CompanyBranchID</code>	<code>number</code>
<code>ClientCode</code>	<code>string</code>
<code>FullName</code>	<code>string</code>
<code>ClientName</code>	<code>string</code>
<code>Vat</code>	<code>string</code>
<code>ClientTypeID</code>	<code>number</code>

Property	Type
MarketSegmentID	number
MarketSegmentIDs	number[]
Addresses	Address[]
ContactInfoList	Array<ContactInfo>
ContactPersonList	Array<ContactPersons>
registrationData	Array<ClientSupplierRegistration>
ImgPath	string

Diagram

```
graph LR
    Client[Client]
    Client --> Clone[clone(): Client]
    Client --> CloneClient[cloneClient(): Client]
    Clone --> ClientCopy[Client copy]
    CloneClient --> ClientCopy
```

Usage

```
import { Client } from './models/person/client.model';

const client = new Client();

const copiedClient = client.clone();
const copiedClientFromClientMethod = client.cloneClient();
```

AI Coding Instructions

- Use `clone()` or `cloneClient()` when code needs a separate `Client` instance instead of mutating the original.
- Keep cloning behavior aligned between `clone()` and `cloneClient()` when changing the model.
- Check call sites before changing clone behavior, especially forms and state-management code that may depend on copied instances.

Relationships
