Usage

```
const copiedClient: Client = client.clone();

const copiedClientFromHelper: Client = client.cloneClient();
```

AI Coding Instructions

- Keep `clone()` and `cloneClient()` return values typed as `Client`.
- Use cloning methods when code needs a separate `Client` instance.
- Check both cloning methods before changing copy behavior, since callers may depend on either method.
- Avoid mutating a cloned instance when the original instance must remain unchanged.
