  constructor(
    private readonly dashboardLibraryService: DashboardLibraryService
  ) {}

  ngOnInit(): void {
    if (this.dashboardLibraryService.checkFeatureSubscription()) {
      this.widgets = this.dashboardLibraryService.getAllWidgets();
      this.dashboardTabs = this.dashboardLibraryService.mappingDashboard();
      this.dashboardLibraryService.getRolesDashboard();
    }
  }

  saveChanges(): void {
    this.dashboardLibraryService.savelatestmodifications();
    this.dashboardLibraryService.saveDashboardTabs();

}
```

AI Coding Instructions

- Call `checkFeatureSubscription()` before exposing dashboard features that depend on subscription state.
- Use `mappingDashboard()` for current dashboard tab data and `unmappingDashboard()` when working with legacy tab structures.
- Keep widget selection aligned with the `Widget[]` returned by `getAllWidgets()`.
- Use the save methods after dashboard, tab, or role changes so UI changes are persisted.

- Keep role dashboard calls grouped with dashboard access logic when using `getRolesDashboard()` or `getRoleDashboardById()`.
