MenuSettings

Kind: Class

Source: Pams/Web/Pams.WebApp/Client/app/core/app-menu/menu.settings.ts (line 4)

Part of: Pams

Menu data mock

MenuSettings contains mock data for the application menu. Its CompareUrl() method checks the current URL context and returns a boolean that menu code can use when determining navigation state.

Methods

Method	Signature	Returns
CompareUrl	CompareUrl(url: string, val: string)	boolean

Properties

Property	Type
root	any

Diagram

```
graph LR
  MenuSettings[MenuSettings] --> MenuData[Mock menu data]
  MenuSettings --> CompareUrl[CompareUrl()]
  CompareUrl --> Result[boolean URL match result]
  Result --> AppMenu[Application menu]
```

Usage

```
import { MenuSettings } from './menu.settings';

const menuSettings = new MenuSettings();

const matchesCurrentUrl = menuSettings.CompareUrl();

if (matchesCurrentUrl) {
  // Apply the matching menu state.
}
```

AI Coding Instructions

- Keep menu mock data and URL comparison behavior within `MenuSettings`.
- Treat `CompareUrl()` as a boolean check when wiring menu selection or visibility logic.
- Update dependent menu components when changing the shape of menu data.
- Avoid duplicating URL matching logic in application menu components.
