MenuSettings

Kind: Class

Source: Pams/Web/Pams.Web/Client/app/settings/app/menu.settings-old.ts (line 4)

Part of: Pams

Menu data mock

`MenuSettings` contains mock menu data for the client settings area. Its `CompareUrl()` method returns a boolean used to check whether a menu item matches the current URL context.

Methods

Method	Signature	Returns
<code>CompareUrl</code>	<code>CompareUrl(url: string, val: string)</code>	<code>boolean</code>

Properties

Property	Type
<code>root</code>	<code>any</code>

Diagram

```

  MenuSettings --> CompareUrl[CompareUrl()]
  CompareUrl --> MatchResult[boolean match result]
  MatchResult --> MenuState[Active menu state]
```

Usage

```
import { MenuSettings } from "../menu.settings-old";

const menuSettings = new MenuSettings();

const isCurrentMenuUrl = menuSettings.CompareUrl();

if (isCurrentMenuUrl) {
  // Mark the related menu entry as active.
}
```

AI Coding Instructions

- Keep menu mock data aligned with the settings navigation structure used by the client.
- Treat `CompareUrl()` as the URL matching point for active menu state.
- Preserve the boolean return contract when changing `CompareUrl()`.
- Check callers before changing menu data shape or URL comparison behavior.
