Where it refuses work

- `MrmDepreciationComponent` stops the work with an early return when `this.dashboardLibraryService.checkFeatureSubscription(this.widget.chartEnumId)` .
- `MrmDepreciationComponent` stops the work with an early return when `month.MonthId == 12` .
- `MrmDepreciationComponent` stops the work with an early return when `month[propertyName] < this.data[bIndex - 1][propertyName]` .
- `MrmDepreciationComponent` stops the work with an early return when `month[propertyName] < this.totalBookingMonths[index - 1][propertyName]` .

      declarations: [MrmDepreciationComponent],
    });

    fixture = TestBed.createComponent(MrmDepreciationComponent);
    component = fixture.componentInstance;
  });

  it('loads and formats depreciation dashboard data', () => {
    fixture.detectChanges();

    if (component.checkFeatureSubscription()) {
      component.getDashboardData();
      component.calculateSumByYear();
      component.calculateSumByMonth();

      const formattedPrice = component.getpriceFormatted();
      const monthName = component.translateMonthName();

      expect(formattedPrice).toBeDefined();
      expect(monthName).toBeDefined();
    }
  });
});

AI Coding Instructions

- Keep data loading and initialization aligned with `ngOnInit` and `ngOnChanges` .

- Check `checkFeatureSubscription()` before showing or requesting depreciation dashboard data.
- Run `calculateSumByYear()` and `calculateSumByMonth()` only after the required dashboard data is initialized.
- Use `translateMonthName()` and `getpriceFormatted()` for widget display values instead of formatting those values in templates.
- Save changes through `saveDashboardData()` after updating the component's depreciation state.
