AI Coding Instructions

- Let Angular invoke `ngOnInit` and `ngOnChanges` ; do not call lifecycle hooks directly from application code.
- Keep data loading in `getDashboardData()` and process returned data through `afterResponse()` .
- Preserve the existing `setChaching()` and `getChaching()` method names when working with cached widget state.
- Initialize chart event wiring in `onChartInit()` and keep chart click behavior in `onPlannedVisitsChartClick()` .
- When adding filter inputs or dashboard controls, route updates through `onValueChanged()` so the widget reloads consistently.
