Microsoft.AspNet.Identity.Owin

Kind: Service

Source: Pams/Logic/Pams.Business/Pams.Business.csproj (line 1)

Part of: Pams

NuGet package dependency

Microsoft.AspNet.Identity.Owin is a NuGet dependency in the legacy Pams.Business project that connects ASP.NET Identity with the OWIN request pipeline. It supports authentication middleware configuration and access to Identity managers through the OWIN context.

Diagram

```
sequenceDiagram
    participant Client
    participant OWIN as OWIN Pipeline
    participant Identity as ASP.NET Identity
    participant App as Pams.Business

    Client->>OWIN: Send authenticated request
    OWIN->>Identity: Read authentication cookie or token
    Identity-->>OWIN: Resolve identity and claims
    OWIN->>App: Continue request with authenticated principal
    App-->>Client: Return response
```

Usage

```
async function getCurrentUser() {
    const response = await fetch("/api/account/current", {
        credentials: "include",
        headers: {
            Accept: "application/json",
        },
    },
```

```

});

if (!response.ok) {
    throw new Error("Authentication request failed");
}

return response.json();
}

getCurrentUser().then((user) => {
    console.log(user);
});

```

AI Coding Instructions

- Keep `Microsoft.AspNet.Identity.Owin` package references aligned with the ASP.NET Identity and OWIN package versions used by `Pams.Business`.
- Configure Identity middleware before endpoints that require an authenticated user.
- Resolve Identity managers from the OWIN context rather than creating them directly during request handling.
- Treat this dependency as part of the legacy ASP.NET application pipeline; do not import it into TypeScript or browser code.
