Part of: Pams

NuGet package dependency

Owin is a NuGet package dependency declared by `Pams.Core`. It makes OWIN interfaces available to code that connects application components to an OWIN host or middleware pipeline.

1 Diagram

2 Usage

```
import { readFile } from "node:fs/promises";
import { execFile } from "node:child_process";
import { promisify } from "node:util";

const execFileAsync = promisify(execFile);
const projectPath = "Pams/Core/Pams.Core/Pams.Core.csproj";

const projectFile = await readFile(projectPath, "utf8");

if (!projectFile.includes("Owin")) {
    throw new Error("The Pams.Core project does not declare the Owin dependency.");
}
```

```
console.log("Owin dependency restored for Pams.Core.");
```

3 AI Coding Instructions

- Keep the Owin package reference aligned with the dependency format already used by `Pams.Core`.
- Run `dotnet restore` after changing the project file or package dependency declarations.
- Use OWIN interfaces only where code must integrate with an OWIN host or middleware pipeline.
- Check package compatibility with the target framework configured in `Pams.Core.csproj`.
