Serilog.FullNetFx

Kind: Service

Source: Pams/API/Pams.API/Pams.API.csproj (line 1)

Part of: Pams

NuGet package dependency

Serilog.FullNetFx is a NuGet package dependency declared in Pams.API.csproj . It supports Serilog logging in the legacy .NET Framework API project, allowing application events and errors to be written through the configured Serilog pipeline.

Diagram

```
sequenceDiagram
    participant API as Pams.API
    participant Serilog as Serilog.FullNetFx
    participant Sink as Configured Log Sink

    API->>Serilog: Write log event
    Serilog->>Sink: Send formatted log entry
```

Usage

```
// Serilog.FullNetFx is consumed by the .NET API project.
// A client calls an API endpoint; the API logs the request through Serilog.

const response = await fetch("/api/patients/123", {
    headers: {
        Accept: "application/json",
    },
});

if (!response.ok) {
```

```
throw new Error(`API request failed: ${response.status}`);  
}
```

AI Coding Instructions

- Keep `Serilog.FullNetFx` references in `Pams.API.csproj` aligned with the legacy .NET Framework target.
- Configure Serilog during API startup before handling requests.
- Write structured log properties instead of concatenating request or entity data into log messages.
- Do not expose credentials, tokens, or sensitive patient data in log events.
- Check configured Serilog sinks when diagnosing missing API logs.
