

System.Web

August 18, 2026

System.Web

Kind: Service

Source: Pams/Core/Pams.Core/Pams.Core.csproj (line 1)

Part of: Pams

NuGet package dependency

`System.Web` is a NuGet package dependency declared in `Pams.Core.csproj`. It provides legacy ASP.NET web APIs that Pams.Core can reference when interacting with HTTP requests, responses, sessions, or hosting context.

Diagram

```
sequenceDiagram
    participant Client
    participant WebApp
    participant SystemWeb as System.Web
    participant PamsCore as Pams.Core

    Client->>WebApp: Send HTTP request
    WebApp->>SystemWeb: Access request context
    SystemWeb->>PamsCore: Provide web-related APIs
    PamsCore-->>WebApp: Return application result
    WebApp-->>Client: Send HTTP response
```

Usage

```
async function loadPamsData() {
    const response = await fetch("/api/pams");

    if (!response.ok) {
        throw new Error("Pams API request failed");
    }
}
```

```
return response.json();  
}  
  
loadPamsData().then((data) => {  
    console.log(data);  
});
```

AI Coding Instructions

- Treat `System.Web` as a legacy ASP.NET dependency referenced by `Pams.Core.csproj`.
- Keep web-context code isolated from domain logic where possible.
- Do not add `System.Web` APIs to code that must run outside the ASP.NET hosting environment.
- Check project target compatibility before changing or removing this package reference.

Used by

1 reference from 1 file. Each is a place in this repository where the symbol is actually used — go read one rather than trusting an example.
