Libraries — Overview

Applications > Libraries

Libraries provides a central area for maintaining library records used across the application. It supports consistent reference information for operational and administrative work.

Sales representatives, account managers, project managers, purchasing officers, warehouse managers, and inventory controllers can use this area when library information must be reviewed, updated, shared, or connected to related application functions. The available controls also provide access to roles, attachments, tickets, dashboards, and reports.

What you can do here

- Create a library record by selecting **New Library**.
- Work with the Libraries list by using the table activity control (**icn-table-active**).
- Apply the available update action with **icn-update**.
- Modify a library record through Edit (**Edit ""**) and manage related roles through Roles (**"" Roles**).
- Confirm or abandon the current action using **OK** or **Cancel**.
- Export available library information by selecting **Export**.
- Open related functions through **Tickets**, **Attach**, **Dashboard**, and **Reports**.
