## Overview

Use this page when you need to find a product, review its stock row, arrange the displayed columns for your role, or export the current stock view for further review.

## Settings

Before relying on the Stock page for routine review, select or create a layout that presents the columns required for your work. The available layout controls affect the way the Stock list is displayed; they do not create or change stock records.

1. Open **Stock (By Product)** from the application navigation.

## Stock

2. Decide whether the standard display is sufficient.
  - Select **Standard Layout** to use the standard list layout.
  - Select **Columns Chooser** when you need to choose which columns appear in your stock view.
3. If you need a reusable personal or role-specific display, select **Add Layout**. Enter a value in **Layout name**, then select **Save**.

## Stock

**Tip:** Use a clear layout name that identifies its purpose, such as “Warehouse Stock Review” or “Sales Availability Review”.

- When editing an existing layout, choose the columns required for the review and select **Update Current** to save the changes to the current layout.

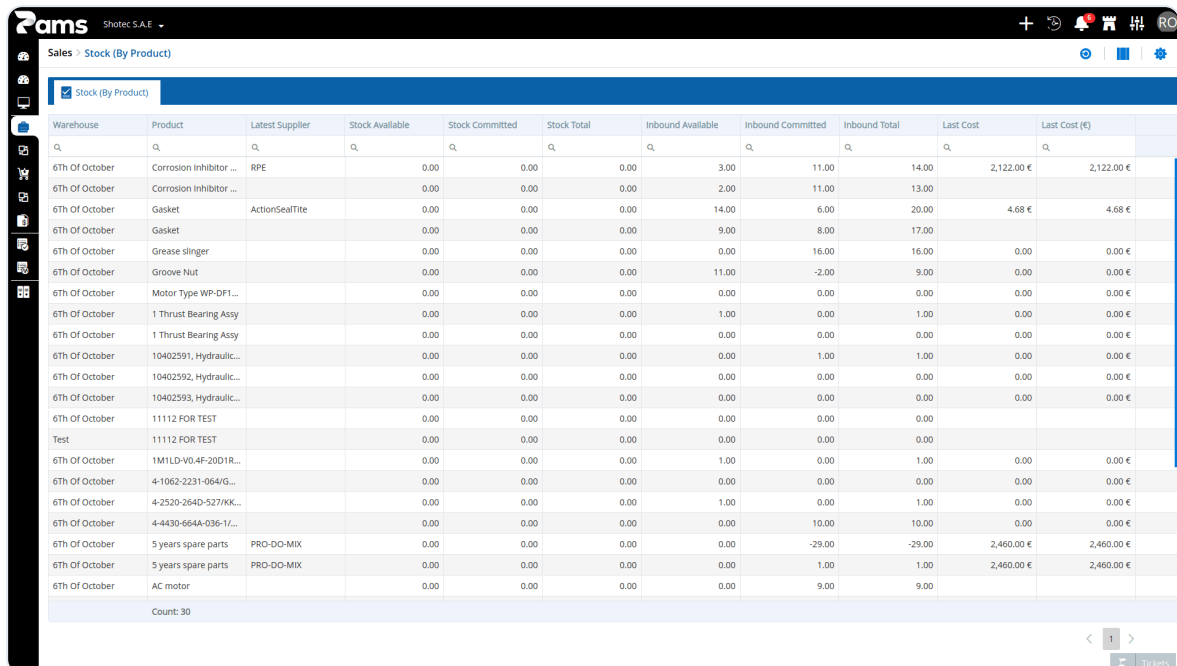

5. If a saved layout is no longer required, select **Delete Current**. Confirm the removal with **Delete**, or select **Cancel** to keep the layout.

**Warning:** Deleting a current layout removes that saved layout. Select **Cancel** if you only intended to stop editing.

## Workflow

The Stock page is a list-based review workspace. The available controls support locating stock rows, selecting a suitable list layout, refreshing the displayed information, and exporting the view. No stock adjustment, receipt, transfer, or reservation action is available from the supplied Stock screen.

1. Open **Stock (By Product)** and review the stock list.

The screenshot shows the 'Stock (By Product)' interface in the Pams system. The table displays stock data for various products across different warehouses. The columns include Warehouse, Product, Latest Supplier, Stock Available, Stock Committed, Stock Total, Inbound Available, Inbound Committed, Inbound Total, Last Cost, and Last Cost (€). The data is filtered by '6th Of October' in the Warehouse column. The table shows 30 records, with a 'Count: 30' indicator at the bottom.

| Warehouse      | Product                 | Latest Supplier | Stock Available | Stock Committed | Stock Total | Inbound Available | Inbound Committed | Inbound Total | Last Cost  | Last Cost (€) |

## Stock

Each row represents a product in a warehouse context. The list includes columns such as **Warehouse**, **Product**, **Latest Supplier**, **Stock Available**, **Stock Committed**, and **Stoc**. Use the visible columns to identify the warehouse-product combination that requires review.

2. At the decision point of finding a specific item or reviewing all displayed items, choose the appropriate search approach.
  - To locate a specific record, enter a search value in **Search box**.

- To return to a broader review, clear or revise the value in **Search box**.
- If more results are available than the current page shows, use **Previous Page** to return to an earlier page of results.

**Note:** Search before exporting when you need an extract for a particular product or warehouse. This helps keep the exported review focused on the records you are investigating.

3. At the decision point of whether the visible columns support the review, keep or change the layout.
  - If the current columns are appropriate, continue with the active layout.
  - If you need a different column arrangement, select **Columns Chooser** and then save the arrangement using **Update Current**.
  - If the current layout should not be retained, select **Standard Layout** to return to the standard display.
4. At the decision point of whether the displayed stock information needs refreshing, select **icn-update**.

Review the refreshed list before making a reporting or operational decision based on the displayed stock figures.

5. At the decision point of whether the current view must be shared or analysed outside the application, select **Export**.

Export only after confirming that the search criteria and displayed layout contain the stock rows and columns required for the intended review.

## Examples

A sales representative is reviewing stock for a product required for a sales job and needs to determine which warehouse row to review before discussing availability with the project team.

1. Open **Stock (By Product)**.
2. In **Search box**, enter the product name or other identifying search value used by the business. Review the matching rows and identify the relevant **Warehouse** and **Product** combination.

3. Review the displayed **Stock Available** and **Stock Committed** values for that row.  
The representative uses these visible values as the basis for the internal availability review.
4. Because the representative also needs supplier-related information, select **Columns Chooser** and ensure that **Latest Supplier** is included in the working layout. Select **Update Current** if the revised layout should be retained.
5. Select **icn-update** to refresh the list, then verify the row again.
6. Select **Export** to create an extract of the reviewed stock view for the sales job discussion.

## Tips

**Tip:** Use a saved layout when the same team repeatedly reviews the same stock columns. This reduces the need to reconfigure the list for each review.

**Note:** The Stock page is organised by product and warehouse. Confirm both the **Warehouse** and **Product** columns before relying on a stock row.

**Warning:** Do not treat a saved list layout as a stock transaction. The available controls manage the display and export of stock information only.

## Troubleshooting

| Symptom                                                                   | Likely cause                                                                              | Fix                                                                                                                  |
|---------------------------------------------------------------------------|-------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------|
| The required product row is not visible.                                  | The current list is too broad, or the search value does not identify the required record. | Enter or revise the value in <b>Search box</b> and review the resulting rows.                                        |
| The required stock information is not shown as a column.                  | The active layout does not include the needed column.                                     | Select <b>Columns Chooser</b> , adjust the displayed columns, and select <b>Update Current</b> to retain the change. |
| The displayed list does not reflect the information you expect to review. | The list may need to be refreshed.                                                        | Select <b>icn-update</b> , then review the relevant warehouse-product row again.                                     |

| Symptom                       | Likely cause                                  | Fix                                                                                                                                                                  |
|-------------------------------|-----------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| An unwanted layout is active. | A saved layout has been selected or retained. | Select <b>Standard Layout</b> to use the standard display, or select <b>Delete Current</b> and confirm with <b>Delete</b> if the saved layout is no longer required. |
