System Requirements

This page explains the basic device and browser requirements for using Sherkety ERP & Website Platform.

Supported Browsers

Sherkety ERP & Website Platform works best on current versions of modern web browsers, including:

- Google Chrome
- Microsoft Edge
- Mozilla Firefox
- Safari

For the best experience, use the latest available version of your browser. Older browsers may still open parts of Sherkety ERP & Website Platform, but some pages, menus, forms, or editing tools may not work as expected.

Internet Connection

Sherkety ERP & Website Platform requires an active internet connection.

A stable broadband or mobile data connection is recommended, especially when:

- browsing image-rich pages
- switching languages
- opening admin pages
- editing content
- saving changes

If your connection is slow or unstable, pages may load more slowly and some actions may take longer to complete.

Supported Devices

You can use Sherkety ERP & Website Platform on:

- Desktop computers
- Laptop computers
- Tablets
- Mobile phones

The public website is designed to adjust to different screen sizes, including mobile devices.

The admin area is also responsive, but it is best used on a desktop or laptop screen for easier navigation, editing, and viewing of tables, settings, and page content.

Recommended Screen Size

For the most comfortable experience:

- **Public website:** works on mobile, tablet, and desktop screens
- **Admin area:** recommended on screens at least **1280 × 720**
- **Best editing experience:** **1366 × 768** or higher

Smaller screens can still be used, but some admin pages may feel more crowded and may require more scrolling.

Display and Interface Support

Sherkety ERP & Website Platform includes features such as:

- responsive menus
- language switching
- light and dark appearance options
- notifications
- date selection
- search and quick navigation tools
- charts and visual summaries

To use these comfortably, keep your browser window updated and avoid very small screen sizes when working in the admin area.

Browser Settings

For normal use of Sherkety ERP & Website Platform, your browser should allow:

- JavaScript enabled
- Cookies enabled
- Local storage enabled

These common browser settings help Sherkety ERP & Website Platform remember preferences such as language choice, appearance mode, and sign-in state.

Accessibility and Usability Notes

Sherkety ERP & Website Platform can be viewed on touch screens and with a mouse and keyboard. For longer admin sessions, a keyboard and larger screen are recommended.

If you are new to moving around the website, see:

- [Browsing the Sherkety Public Website](#)
- [Using Header Menus and Footer Links](#)
- [Understanding Breadcrumbs and Page Location](#)

If Something Does Not Work

If a page does not display correctly or an action does not complete:

- refresh the page
- make sure your browser is up to date
- try another modern browser
- check your internet connection
- try again on a larger screen if you are using a phone

If the issue continues, contact your Sherkety ERP & Website Platform administrator or support contact.
