

Start here

August 25, 2026

tj/commander.js

What this repository is for is not stated in prose this page can quote, so it cannot be established from this repository alone.

- **Terms of use** — MIT [package.json:16].
- **Version** — 15.0.0 [package.json:3].
- **Editions** — whether this repository is the whole product or one edition of it cannot be established from this repository alone.
- **Running it** — no run path was found in the parsed corpus, so how to start it cannot be established from this repository alone.

What is in here

Each part names what it holds before how much of it there is. The counts are read from the evidence census computed for this snapshot, one per part at most.

- **Docs** — no symbol kind this page can name. A file to open: deprecated.md [docs/deprecated.md:1]. 117 entities under docs [census].
- **Zh CN** — no symbol kind this page can name. 68 entities under docs/zh-CN [census].
- **Lib** — classes and functions. A file to open: argument.js [lib/argument.js:3]. 10 entities under lib [census].
- **.github** — no symbol kind this page can name. A file to open: PULL_REQUEST_TEMPLATE.md [.github/PULL_REQUEST_TEMPLATE.md:1]. 4 entities under .github [census].
- **Repository root and unclaimed files** — constant and functions. A file to open: CHANGELOG.md [CHANGELOG.md:1]. 660 entities in files no part claims [census].

What this repository carries

One row per capability lane, scoped to where the evidence for it sits. A lane marked as not found means nothing in the parsed corpus matched it — which is a fact about this parse, and the honest place to start looking rather than the end of the question.

Capability	In this repository	Where
Database models	not found	—
HTTP endpoints	not found	—
Controllers	not found	—
Configuration	not found	—
Automated tests	yes	—
Written documentation	yes	<code>.github/PULL_REQUEST_TEMPLATE.md</code> , <code>CHANGELOG.md</code>
Licence	yes	<code>LICENSE</code>

Where next

Five ways in. Each one names pages that exist in this documentation, or says what the repository holds instead.

- **Deploying it** — no deployment descriptor and no deployment page were found; how this is deployed cannot be established from this repository alone.
- **Understanding the architecture** — [System Overview](#), `Docs` , `Zh CN` and `Lib` .
- **Contributing a change** — [Documentation health](#) and `[CONTRIBUTING.md:1]`.
- **Reviewing security** — no symbol name or path in the parsed corpus matched a security topic, so this page has nothing to hand a reviewer.
- **Extending it** — `Docs` and `Zh CN` .

How this page was assembled

Every count above is read from the evidence census computed for this snapshot; every other claim points at a file and a line you can open.

The census covers 859 entities and 846 relationships across 5 parts `[census]`, and it passed its own independent recount `[census]`.
